

MAKE THE ENGINE STRONGER YOURSELF

How to Write a Slice

A skill is a job, written in *one plain line*.

THE IDEA

MANAGER 06

Business Transformation & Growth

ITS SKILLS

- Process audit
- Revenue gap analysis
- New product scoping
- Systems review
- Operational improvement
- Growth roadmap
- Benchmark analysis

• What-else scan

YOUR NEW LINE

THE SEVEN STEPS

- 1

Say it in one plain sentence.
- 2

Place it under the manager that already thinks that way.
- 3

Match the shape of the skills already there.
- 4

Write one line and save.
- 5

It is live at once no rebuild, no code.
- 6

Prove it point a quick question at it.
- 7

Lock it a git commit, so it is on the record.

One new line, in the same shape, and the system reads it as its own. *Same as its brothers.*

HOW MERIDIAN READS YOUR LINE

You are not writing code. You are describing a job in plain words, and Meridian understands plain words.

1 · YOU WRITE ONE LINE

- **What-else scan** — at the close of any matter, the work the client needs next.

A short bold name, then one plain sentence. Same shape as its brothers.

→ 2 · MERIDIAN READS IT LIKE A PERSON

It takes in the sentence the way you just did. No code, no programming underneath. The words themselves are the instruction.

→ 3 · IT DOES THE JOB WHEN IT FITS

From now on, whenever a matter closes, Meridian surfaces the work that client needs next. The skill simply runs.

Plain words in, real capability out. The sentence is the skill.
