Sales process and AI: how our two approaches fit

For discussion: Vinny Leonard and John Webb O'Rourke. Wed 11 Nov 2026, 14:45 to 15:45, South Court Hotel, Limerick. Confidential. Exploratory and non-binding.

1. What Vinny proposes (from his papers)	2. What Shane, John and Velocity are doing	3. Where the two fit
• **LSOS (Lean Sales Operating System):** five disciplines (Direction, Execution, Visibility, Improvement, Governance); "process first, technology second". • **Route in:** a seven-day Kickstart with no upfront commitment, then a 30/60/90-day blueprint, then implementation and improvement. • **Management artefacts:** sales strategy on a page, pipeline and forecast review, executive dashboard and others. • **Agentic AI design:** one orchestrator and six agents (prospecting, qualification, pipeline, sales execution, forecasting, coaching), working with the client's CRM (customers) and ERP (orders and money). • **Controls:** five autonomy levels; version 1 only recommends and prepares; no autonomous negotiation, discounting, contracts, forecast commitments or order release. • **Position:** vendor-neutral guidance; no promise of revenue growth.	• **People first:** since the summer, role-based sessions with one live client's senior and commercial teams, built around each person's own work, with a personal readiness profile. • **Personal orchestrations:** an AI assistant set up for each leader on their own account, **read and draft only**, with work checked on a second model before it reaches them. • **Proposed ongoing retainer:** (a) AI capability and learning; (b) defensibility, systems and resilience; (c) cybersecurity; staying ahead of the models; embedding AI with governance. A regular day on site each month. • **What we learned:** adoption follows trust; permissions and a second check come before capability; the pace of change means a standing review, not a one-off project.	• **Front door:** Vinny diagnoses the sales process and sets the management rhythm. • **Delivery:** Velocity trains the team, builds the assistants and agents, and runs governance and security. • **One brief:** his six-agent design is the specification; our controls (draft only, second-model check, least privilege, audit trail) match his autonomy levels. • **Same stance:** people approve; no autonomous commitments in version 1. • **Cybersecurity:** not a separate project; it is how agents are allowed to touch CRM, ERP and email, reviewed regularly. • **Start small:** one pilot client, one team, a short Kickstart, then a monthly retainer.

4. Discussion points: the hour, 14:45 to 15:45

Time	Topic	Points to settle
14:45 to 14:50	**Purpose and ground rules**	Exploratory; nothing binding; confidentiality both ways; any terms to be agreed with Shane McCarthy before anything is committed.
14:50 to 15:00	**Vinny's pipeline**	Who is the first pilot client? What is their sales process and CRM? Where would AI help first: prospecting, pipeline or forecasting?
15:00 to 15:10	**What we do and have learned**	People first, then personal assistants, then governance; draft-only and second-model check; the proposed retainer shape.
15:10 to 15:20	**Where we fit**	Who leads what; the six-agent design as the build brief; one joint offer or two linked offers?
15:20 to 15:30	**Security and governance**	Autonomy levels and bans; least-privilege access to CRM and ERP; audit trail and kill switch; how often the controls are reviewed as models and threats change.
15:30 to 15:40	**Commercial shape**	Pilot structure (Kickstart fee, then monthly retainer); who owns the client relationship; who owns a build made for his client; data protection roles; whether Enterprise Ireland or IDA support applies.
15:40 to 15:45	**Next steps**	One pilot, an owner and a date for each action; who writes up; when we meet again.

Draft for discussion only. Descriptions of Vinny's proposal are taken from his papers of 29 Oct and 3 Nov 2026 and are not a commitment by either side. No client is named.
