STRATEGIC INTELLIGENCE IN THE AI ERA

A GIFT · NO STRINGS

SOFTWOOD SAWMILLING & ENGINEERED WOOD · IRELAND & THE UK

The Compliance Window

The new rules coming for timber, when each one starts to bite, and what being ready looks like. Useful whether we ever work together or not.

PREPARED AND GIVEN FREELY BY VELOCITY AI

FROM SEP 2025

Carbon in public work
A VELOCITY AI GIFT

FROM JUN 2026

Thresholds tighten

30 DEC 2026

EU due-diligence

30 JUN 2027

Reaches small firms

JULY 2026

Two sets of rules are arriving on fixed dates. Neither is a surprise, and both reward the operators who prepare early. Here is the runway, in order.

● FROM SEP 2025

Irish whole-life carbon enters public procurement

Whole-life carbon assessment became a requirement on larger publicly funded projects, above roughly €10m non-residential and €60m residential, with public bodies asked to request environmental product declarations.

SOURCE: GOV.IE PUBLIC PROCUREMENT GUIDANCE

○ FROM JUN 2026

The carbon thresholds tighten

The same whole-life carbon requirement widens to smaller projects, above roughly €5m non-residential and €30m residential, pulling more public work into scope.

SOURCE: GOV.IE PUBLIC PROCUREMENT GUIDANCE

● 30 DEC 2026

EU deforestation due-diligence applies

Operators placing wood on the EU market provide geolocation and a due-diligence statement for each consignment, verified against evidence the land was not deforested after December 2020. Large and medium operators first. The date has been moved before, and is currently firm.

SOURCE: EUROPEAN COMMISSION

○ 30 JUN 2027

EU deforestation extends to small operators

The same due-diligence obligations reach micro and small enterprises, completing the coverage across the market.

SOURCE: EUROPEAN COMMISSION

Two rules, two kinds of data. Here is exactly what each one asks a timber operator to be able to produce, in plain terms, so nothing on the runway is a surprise.

RULE ONE

Traceability

The EU deforestation regulation turns provenance into data you can produce on demand, per consignment placed on the EU market.

- Geolocation of the harvest plots, to a polygon for larger areas.

- A due-diligence statement carried with the consignment.

- Evidence the land was not deforested after December 2020.

- Records held and available for checking.

- A single owner accountable for each due-diligence sign-off.

RULE TWO

Carbon

Public and larger private work increasingly asks for the carbon story of a product to be measured and declared, not claimed.

- Whole-life carbon assessment on qualifying public projects.

- Product-level environmental product declarations on request.

- Embodied-carbon data specifiers can design against.

- A consistent method behind the numbers.

- Declarations kept current as ranges and methods change.

The data these rules ask for is the same data that proves a low-carbon product and specifies you in. Build it once, and it works twice.

Geolocation, per-pack records and a measured carbon figure are a compliance task on one reading. On another, they are exactly what lets a supplier evidence a traceable, low-carbon product and become the easy choice as carbon rules tighten. The operators who set the data up early meet the deadline and hold a selling position at the same time. The clock is real, and so is the upside.

01 Meet the deadline The records the rules ask for, ready before the dates arrive.	02 Sell the low-carbon story A measured, evidenced product that specifies in as carbon rules tighten.	03 Run on better data Per-pack records that sharpen buying, grading and planning too.
--	---	---

WHAT READY LOOKS LIKE

☐ Harvest-plot geolocation captured and stored per source.	☐ A due-diligence statement that travels with each consignment.
☐ A per-pack record you can produce on request, not rebuild.	☐ A repeatable method behind every carbon number.
☐ Product-level declarations ready for the ranges you sell.	☐ One data foundation serving both rules, not two silos.

Given freely, and useful
whether we ever do business or
not. If it saved you an afternoon
of working out the runway, it
did its job.
