

GROUP STRUCTURE

Noesis: the group and its companies

What each company is, what it does, who it serves and how it makes money.

AS AT 1 NOVEMBER 2026

GROUP STRUCTURE

Noesis and its companies

Noesis is the group holding company. Each company below is held by Noesis. ODIN Labs is held by Asterial. Mac Enterprises is Shane's own and sits outside the group.

AS AT 1 NOVEMBER 2026

Asterial
Home of ODIN, the estate of IP

ODIN Labs
The research and development arm of Asterial

Occasio
A private language model that keeps our IP in our hands

Zubelsala
Continuity custodian and vault for standalone IP

SanCelvio
The social good arm of Noesis

Fiducia
Governance, testing and security for AI systems

Glór
AI-native media, newsrooms and publishing

Táirseach
Property intelligence

Sensai
Personalised intelligence

Inneall
Builds AI engines: agents, systems and orchestrations

Fabrica
Bespoke, high-value IP builds in architecture, infrastructure and systems

Velocity AI
Strategic intelligence, training and building for enterprises

Tír AI
Technology built around people over 50

AI Accountancy
Accountancy built on AI

Kairos
Shane's side businesses and projects

OUTSIDE THE GROUP

Mac Enterprises
Shane's own projects, held outside the group

AT A GLANCE

The group at a glance

Noesis is the group holding company. Each company is held by Noesis; ODIN Labs is held by Asterial. Mac Enterprises is Shane's own and sits outside the group.

COMPANY	WHAT IT IS	BUSINESS MODEL
Noesis	The group holding company	Holding company. Its value lies in its shareholdings in the operating companies.
Asterial	Home of ODIN, the estate of IP	Five revenue streams: IP sales and acquisitions; research and development; frontier architecture, meaning bespoke, one-off builds; revenue from subsidiaries that access its technology; and IP licensing.
ODIN Labs	The research and development arm of Asterial	Research and development: earns from the R&D it carries out.
Occasio	A private language model that keeps our IP in our hands	Group LLM access; licensing to be discussed.
Zubelsala	Continuity custodian and vault for standalone IP	IP holding and incubation. It licenses the IP it holds, including the continuity copy of the shared core technology, and incubates new companies through to spin-out.
SanCelvio	The social good arm of Noesis	Products and systems for social good, earning from users and organisations in each area, alongside grant income.
Fiducia	Governance, testing and security for AI systems	AI governance, testing and security, sold to organisations that run AI systems.
Glór	AI-native media, newsrooms and publishing	Licensing and distribution of AI news desks, newsroom systems, agents and AI journalists.
Táirseach	Property intelligence	Property intelligence, sold to developers, agents, portfolio owners, lenders and the wider property industry.
Sensai	Personalised intelligence	Subscriptions for individuals, business owners, teams and companies, plus licences for teams, divisions and departments.
Inneall	Builds AI engines: agents, systems and orchestrations	Builds AI engines (agents, systems and orchestrations) for enterprise clients, as team builds and bespoke builds.
Fabrica	Bespoke, high-value IP builds in architecture, infrastructure and systems	Bespoke commissions, delivered either as an outright IP sale at a premium or under licence to the client, agreed deal by deal.
Velocity AI	Strategic intelligence, training and building for enterprises	Strategic intelligence, training and build engagements for enterprises.
Tír AI	Technology built around people over 50	Apps and systems for people aged 50 and over, sold to individuals, families, employers and insurers.
AI Accountancy	Accountancy built on AI	Licensed to accountancy firms, business owners and groups worldwide.
Kairos	Shane's side businesses and projects	Majority shareholder in each venture, with IP licensed or spawned into it; the ventures run on subscriptions and are built to be acquired.
Mac Enterprises	Shane's own projects, held outside the group	Held personally by Shane, outside the group.

THE COMPANIES

Company by company

Noesis

The group holding company

WHAT IT DOES	Noesis is the holding company for Shane's AI-era companies. It holds their shares, sets their direction and decides where to invest, including in new companies such as Occasio.
WHO IT SERVES	The companies it holds.
BUSINESS MODEL	**Holding company. Its value lies in its shareholdings in the operating companies.**

Asterial

Home of ODIN, the estate of IP

WHAT IT DOES	Asterial is the home of ODIN, the Orchestrated Distributed Intelligence Network: an estate of more than 15,000 pieces of intellectual property. It develops ODIN and earns from it through the sale and licensing of IP, research and development, and frontier architecture: bespoke, one-off builds. Its research and development arm, ODIN Labs, sits beneath it.
WHO IT SERVES	Buyers and licensees of its IP, clients who commission frontier builds, and the companies that use its technology.
BUSINESS MODEL	**Five revenue streams: IP sales and acquisitions; research and development; frontier architecture, meaning bespoke, one-off builds; revenue from subsidiaries that access its technology; and IP licensing.**
HELD BY	Noesis

ODIN Labs

The research and development arm of Asterial

WHAT IT DOES	ODIN Labs is the research and development arm of Asterial. New modules are built and tested here before they join the IP estate, proven first in a synthetic testing sandbox. It also takes grant funding and support to build products and systems out.
WHO IT SERVES	Asterial, and the products and systems it builds out.
BUSINESS MODEL	**Research and development: earns from the R&D it carries out.**
HELD BY	Asterial

Occasio

A private language model that keeps our IP in our hands

WHAT IT DOES	Occasio builds and runs a private language model. Whatever is fed into an outside model can end up training it, so data sovereignty matters: with its own model, the IP and systems that run on it stay in their owners' hands.
WHO IT SERVES	The companies that run on it.
BUSINESS MODEL	**Group LLM access; licensing to be discussed.**
HELD BY	Noesis

Zubelsala

Continuity custodian and vault for standalone IP

WHAT IT DOES	Zubelsala keeps a continuity copy of the shared core technology, refreshed every 90 days, so the work can always carry on. It also holds standalone IP and incubates future companies until they are ready to spin out.
WHO IT SERVES	The companies it incubates, and those that rely on its continuity copy.
BUSINESS MODEL	**IP holding and incubation. It licenses the IP it holds, including the continuity copy of the shared core technology, and incubates new companies through to spin-out.**
HELD BY	Noesis

SanCelvio

The social good arm of Noesis

WHAT IT DOES	SanCelvio builds products and systems for social good. They include Continuity for endometriosis, Famora for dementia, Rose for Parkinson's and Bláth for children with intellectual disabilities, with Cosán for cancer in work.
WHO IT SERVES	People living with these conditions, their families and carers, and the organisations and funders working in each area.
BUSINESS MODEL	**Products and systems for social good, earning from users and organisations in each area, alongside grant income.**
HELD BY	Noesis

Fiducia

Governance, testing and security for AI systems

WHAT IT DOES	Fiducia, the Latin for trust and the root of fiduciary, builds the governance, testing and security that let organisations run AI systems safely and stand over them with regulators and auditors. It brings out a large body of IP already built: frameworks, certification tests and controls.
WHO IT SERVES	Organisations running AI systems, and the regulators and auditors they answer to.
BUSINESS MODEL	**AI governance, testing and security, sold to organisations that run AI systems.**
HELD BY	Noesis

Glór

AI-native media, newsrooms and publishing

WHAT IT DOES	Glór, the Irish for voice, builds and runs AI-native media: governed newsrooms of AI journalists, publishing desks and audience systems. It brings out a large body of media IP already built.
WHO IT SERVES	Audiences, publishers, media owners and brands.
BUSINESS MODEL	**Licensing and distribution of AI news desks, newsroom systems, agents and AI journalists.**
HELD BY	Noesis

Táirseach

Property intelligence

WHAT IT DOES	Táirseach, the Irish for threshold, is a property intelligence organism. It turns property data into intelligence people can act on, and is live across three countries. Its assets are its property IP and data.
WHO IT SERVES	Developers, agents, portfolio owners, lenders and others working at a senior level in the property industry.
BUSINESS MODEL	**Property intelligence, sold to developers, agents, portfolio owners, lenders and the wider property industry.**
HELD BY	Noesis

Sensai

Personalised intelligence

WHAT IT DOES	Sensai builds personalised intelligence for mindset, habits and performance, so people and teams have intelligence working beside them every day.
WHO IT SERVES	Individuals, business owners, teams and companies.
BUSINESS MODEL	**Subscriptions for individuals, business owners, teams and companies, plus licences for teams, divisions and departments.**
HELD BY	Noesis

Inneall

Builds AI engines: agents, systems and orchestrations

WHAT IT DOES	Inneall, the Irish for engine, builds AI engines: agents, systems, swarms and orchestrations. It takes on large builds for its clients.
WHO IT SERVES	Clients that need AI engines built.
BUSINESS MODEL	**Builds AI engines (agents, systems and orchestrations) for enterprise clients, as team builds and bespoke builds.**
HELD BY	Noesis

Fabrica

Bespoke, high-value IP builds in architecture, infrastructure and systems

WHAT IT DOES	Fabrica designs and builds bespoke, high-value IP, focused on architecture, infrastructure and systems. Clients come to us, or we go to them, with a challenge big enough to warrant a build of its own.
WHO IT SERVES	Organisations that commission a major piece of architecture, infrastructure or systems.
BUSINESS MODEL	**Bespoke commissions, delivered either as an outright IP sale at a premium or under licence to the client, agreed deal by deal.**
HELD BY	Noesis

Velocity AI

Strategic intelligence, training and building for enterprises

WHAT IT DOES	Velocity AI gives enterprises strategic intelligence for the AI era, trains their people, and builds where a client needs it. It works with leadership teams on where AI belongs in their business and how to roll it out safely.
WHO IT SERVES	Enterprises and their leadership teams.
BUSINESS MODEL	**Strategic intelligence, training and build engagements for enterprises.**
HELD BY	Noesis

Tír AI

Technology built around people over 50

WHAT IT DOES	Tír AI builds apps and systems for people over 50, a large and fast-growing market as lifespans lengthen. Its name comes from Tír na nÓg, the land of the ever young. Seanchaí, the healthy ageing app, moves across to it from SanCelvio.
WHO IT SERVES	People aged 50 and over, their families, employers and insurers.
BUSINESS MODEL	**Apps and systems for people aged 50 and over, sold to individuals, families, employers and insurers.**
HELD BY	Noesis

AI Accountancy

Accountancy built on AI

WHAT IT DOES	Brings AI to accountancy: the work of keeping, checking and reporting a business's numbers.
WHO IT SERVES	Accountancy firms, business owners and groups worldwide.
BUSINESS MODEL	**Licensed to accountancy firms, business owners and groups worldwide.**
HELD BY	Noesis

Kairos

Shane's side businesses and projects

WHAT IT DOES	Kairos, the Greek for the right moment to act, holds the side businesses and projects Shane takes on: things that interest him and take a smaller share of his time, such as the Arctic briefing and Barber Republic. A venture can also be a place to test IP.
WHO IT SERVES	The customers and partners of each venture.
BUSINESS MODEL	**Majority shareholder in each venture, with IP licensed or spawned into it; the ventures run on subscriptions and are built to be acquired.**
HELD BY	Noesis

OUTSIDE THE GROUP

Mac Enterprises

Shane's own projects, held outside the group

Mac Enterprises is Shane's own, held personally and outside the Noesis group. It is where he takes on his own projects: helping a cause, building something for someone whose story he likes, and perhaps the beginnings of future companies. It runs on its own equipment, accounts and tools, kept fully separate from the group's companies and their IP.
