

THE CAPABILITY CATALOGUE

EOLAS.

Twenty-One Ways to Use the Intelligence

Irish for knowledge and intelligence. Verified, board-defensible
intelligence, run as a service.

The intelligence inside EOLAS, put to work. Each line below is a way it can be used, written as the question it answers for you, not as a description of the machine underneath. A client picks a tier, three, five, eight, twelve or all twenty-one, and the pick sets the price. Across all of it sits always-on monitoring: the chosen set re-run on a cadence, alerting the moment something moves.

KNOW YOUR FIELD

- ◆ **1. Competitive and landscape intelligence.** When you are entering or defending a market and need the full board of who is playing and what they are doing, with the proof behind each, so you arrive knowing the field cold.
- ◆ **2. Competitor deep-dives and battlecards.** When one rival is the one that matters and you need their moves, pricing, pitch and soft spots on a single card your team can carry into a deal.
- ◆ **3. Market sizing and demand intelligence.** When you need the size of the prize and which way demand is actually moving, before you commit money or quote a number to an investor.
- ◆ **4. Buyer and customer intelligence.** When you need to know what the market truly wants, segment by segment, so you build and sell to real demand instead of your assumptions.

KNOW YOURSELF

- ◆ **5. Opportunity and whitespace mapping.** When you want the open ground nobody has taken yet, the race that is not lost, before a competitor gets there first.
- ◆ **6. Risk and exposure register.** When you or a board need every way the business could get hurt in one place: operational, regulatory, reputational, and the AI-specific risks most people miss.
- ◆ **7. Defensibility and moat analysis.** When you need the honest read on how hard you are to copy and where you are exposed, which is exactly what a buyer or investor will press on.
- ◆ **8. Governance intelligence.** When you need to show a client, a regulator or an investor that your governance is real and mature, increasingly the thing that decides whether a large organisation will work with you at all.

KNOW THE RULES AND THE MONEY

- ◆ **9. Regulatory and compliance exposure.** When you need to know precisely which laws apply, by what date, and whether you carry the obligation as the provider or the deployer. The AI Act especially, with the red lines named.
- ◆ **10. Grant and funding intelligence.** When you want the real, live capital you could actually win, ranked by fit, with the inflated headline figures corrected down to what would land in the account.
- ◆ **11. M&A and consolidation intelligence.** When you want to know who is buying whom in your space, as both a shortlist of targets and an early warning of threats consolidating around you.
- ◆ **12. Technology and vendor intelligence.** When you are deciding build versus buy, and if buy, exactly who to buy from, without learning it the hard way after you have signed.

KNOW HOW YOU ARE BUILT

- ◆ **13. Innovation and product-development intelligence.** When you need to know where innovation is genuinely moving in your field and what to build next, so your roadmap points at the future and not at last year.
- ◆ **14. Systems and architecture intelligence.** When you, or someone assessing you, need a straight read on your technology stack and how AI-ready it truly is. In this market, one of the first things a serious partner checks.

KNOW WHAT IS COMING

- ◆ **15. Scenario and foresight intelligence.** When you need to plan for what is coming and not only what is here: the credible what-ifs down the road and how you would stand in each.
- ◆ **16. Talent and capability intelligence.** When you want to read a rival's next move before they make it, because who they are hiring shows where they are going, often months ahead.

THE SPINE THAT PULLS IT TOGETHER

- ◆ **17. Strategic combined picture and decision grid.** When you have real decisions in front of you and need every lens above laid over the same choices, with one clear verdict each, so a board can decide instead of debate.
- ◆ **18. Evidence pack and board-ready executive summary.** When you need the sourced numbers behind the case and a single board-ready page on top, the document you hand round the table that survives the hard questions.

KNOW WHO YOU ARE DEALING WITH

- ◆ **19. Principal and counterparty diligence.** When you are about to trust someone with money, equity or your name, and need to know whether you can trust them, and whether they can actually do what they say.
- ◆ **20. Relationship and engagement intelligence.** When you have the meeting that matters coming up and need the read before the room: what they really do, where their constraint sits, what to put on the table and what to avoid.
- ◆ **21. Claim and assertion verification.** When someone hands you a deck, a set of numbers or a supplier's promise, and you need every claim tested and returned marked **VERIFIED**, **REPORTED** or **UNVERIFIED**, with the accuracy stated, before you rely on it or repeat it.

HOW EVERY ONE OF THEM IS VERIFIED

Whichever lines you pick, they are checked the same way. A second model, on a different tier from the one that produced the work, tests every material claim against primary sources, claim by claim, two independent sources minimum, before a word reaches you. The last three read a named person or a specific claim, so they carry a heavier gate again, and a human signs them before they ever leave the building.

Know first.
